

Casework Solutions

Commercial

The world at work is exciting and marvelous. People from all walks of life, with all sorts of occupations, contribute their talents and skills for the benefit of the larger community. We at TMI Systems Design Corporation feel fortunate to be a part of so much of it.

All day, and in many cases all night too, people in various towns and cities across the country integrate TMI casework, architectural woodwork and countertops into their places of work. They may be bankers or firefighters, corporate executives or librarians, but they rely on the performance, integrity and durability of TMI products as they execute their duties.

Quality Craftsmanship

CEO & General Manager's Office

Consolidated TelCom
Dickinson, North Dakota

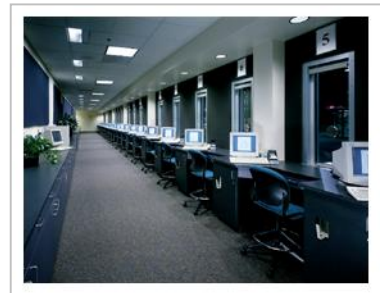

What makes us most proud is that very few of these people ever pause to realize how big a role TMI plays in their day. They just go about their business focusing on their work, which is exactly what well designed, highly functional, long-lasting casework, architectural woodwork and countertops should enable them to do. And if they do happen to notice us, it's only in observation of how the artistry and aesthetics contribute to their environments.

The pace of work today is unlike anything we would have imagined in the past. As a result, the demands and expectations placed on work spaces have evolved to unprecedented levels. Whether it's an executive's office space or a clerk's counter space, aesthetics and ergonomic attributes must enhance comfort and efficiency. Design and construction must be functional and durable. And the overall performance must meet or exceed expectations specific to each job, day after day, week after week, year after year.

Performance & Durability

Ticket Counter

Bank One Ballpark
Phoenix, Arizona

These are the standards by which we measure quality and craftsmanship at TMI. Looking good is certainly important, but it is only the beginning. Our casework is expected to be impressively durable and resilient. We identify all performance and application requirements for each installation and devote full attention to precision and accuracy. Excellence, we believe, is in the details.

Commitment To Function

Casework and architectural woodwork, once regarded as mere storage containers, have become integral components of nearly all aspects of the work process itself. There is a tremendous responsibility on the part of casework manufacturers such as TMI to understand, appreciate and accommodate the functional requirements unique to each installation.

Staff Kitchen

Fire Station
Wisconsin

Consider the fire station kitchen shown at the left as an example. It's functional, spatial and durability requirements are much different from those of an employee lounge or a commercial kitchen. Not only is it subjected to around-the-clock usage, it also needs to withstand and support the dual role of kitchen and social space. Most importantly, congregating firefighters must be able to quickly clear out in an emergency without running into obstructions or one another.

Coat Rack

Fire Station
Wisconsin

In an environment such as this, even things as simple as coat racks have uniquely important access requirements. TMI designs, engineers and builds products with a heightened sensitivity to the real world issues of each application.

TMI also accounts for specialized physical and/or organizational storage requirements. The size, variety and weight of ammunition inventoried at the Florida Department of Law Enforcement (shown below) demonstrate this in a rather unique way.

Ammunition Drawers

Florida Department of Law Enforcement
Pensacola, Florida

TMI has achieved Premium Grade certification from the Architectural Woodwork Institute (AWI) and is proud to be a member of the Woodworking Institute. Our casework can be engineered to meet Zone 4 of the Title 24 seismic standards and has been granted California Office of State Architect Seismic Pre-approval Rating. In addition, our products meet the Scientific Equipment and Furniture Association's (SEFA) standards.

Design Integration

Display & Storage Cases

Dakota Dinosaur Museum
Dickinson, North Dakota

Working with a variety of materials including laminates, woods and metal trim, the use of color, texture and shape is limited only by the imagination.

TMI is uniquely capable of embracing and integrating a facility's architecture and interior design, and extending that vision to the casework, architectural woodwork and countertops.

Reception & Product Display Area

Consolidated TelCom
Dickinson, North Dakota

The character of a building, the type of business conducted, and the personality of the environment can all be accentuated within reception areas, conference rooms and workspaces.

Commissioner's Chambers

City Hall
Dickinson, North Dakota

There is seemingly no limit to the number of ways that TMI can assist architects and interior designers through the use of casework, architectural woodwork and countertops.
